Full subject

Dear Ladies, Gentlemen

This is a sample for a serial letter. For the other changes please look into the file *brief-sample-serial.tex*, there are only a few changes to the standard letter.

In the moment there is only one known issue. In principal you can produce a serial letter with different pages each, in the moment I do not know, how the get in this circumstances the particular *number of the last page*. This number could appear to be not the right one. The work-around is not to print the page-numbering (starting on the second page). Please uncomment in *ethbrief3.cls* the following line then:

```
\hfill\raggedleft\mbox{\eth@xiiiiv\ethpagenam~\thepage~/~\lastpageref*{pagesLTS.arabic}}
```

If anybody could help for this problem, I would like to include this in a following subversion.

Best Regards

Dieter Hennig
